	Concluding that there is at least one value below the lower outlier boundary on the histogram	A1	2.2a
		(3)	
(d)	Mean for males is greater than mean for females so (scientist is correct that) males pelvic breadth is larger on average	В1	2.4
	Standard deviation for males is smaller than standard deviation for females so (scientists is not correct) pelvic breadth of males is less variable	B1	2.4
		(2)	
(e)(<u>i)</u>	The outlier(s) lie below the mean so if they had been removed the mean would have increased	В1	2.2a
	Removing outliers would have decreased the standard deviation	В1	2.2a
(e)(ii)	If outliers had been removed (it is likely that) the males would still have had a larger mean or The standard deviation of the females would have been reduced so conclusion on variability might have changed / conclusion on variability unlikely to have changed as female and male standard deviations were not close including outliers.	B1	2.2b
		(3)	
	(1:	3 marks)	

Notes

(a)

M1 for complete method to find the frequency of females with pelvic breadth 32cm or above A1 for awrt 16

(b)

B1 for a correct mean (awrt 27.6)

M1 for a correct expression for the sd (including √:::)

A1 for awrt 2.30 (allow s = 2.3074 ... awrt 2.31)

(c)

M1 for complete method for either lower outlier limit or upper outlier limit (allow ft on their mean and sd)

A1 for both outlier limits correct

A1 for identifying that the 18-19 bar on the histogram contains value below the lower outlier limit

(d)

- B1 for a suitable comparison of means to comment on average pelvic breadth (allow ft on their mean for females)
- B1 for a suitable comparison of standard deviations to comment on variability of pelvic breadth (allow ft on their sd for females)

(e)(i)

- B1 for considering the effect of removing outliers on female mean
- B1 for considering the effect of removing outliers on female standard deviation

(e)(ii)

B1 for explaining how their conclusion in (d) would have been <u>effected</u> had outliers been removed (either comment)

Question	Scheme	Marks	AOs
6 (a)	For independent events $P(A \cap C) = P(A) \times P(C)$		
	Here $P(A \cap C) = 0$ Therefore A and C not independent	B1	2.4
		(1)	
(b)	$P((A \cup C)') = 0.25 + 0.3 = 0.55$	B1	1.1b
		(1)	
(c)(<u>i)</u> & (ii)	Use of $P(A \cap B) = P(A) \times P(B)$	M1	2.1
(11)	$p = \left(p + \frac{2}{15}\right)\left(p + \frac{2}{5}\right)$	A1	1.1b
	$p^2 - \frac{7}{15}p + \frac{4}{75} = 0$	M1	1.1b
	$p = \frac{4}{15} \text{ or } p = \frac{1}{5}$	A1	1.1b
	Check value of \underline{q} : $p = \frac{4}{15}$ gives negative $q(-0.05)$	M1	2.1
	But $p = \frac{1}{5}$ gives $q = \frac{1}{60}$ So $p = 0.2$	A1	2.2a
		(6)

							(4)

4. (a)
$$P(L > 100) = P\left(Z > \frac{100 - \mu}{0.5}\right) = 0.3$$

 $\Rightarrow \frac{100 - \mu}{0.5} = 0.5244$ MI BI
 $\mu = 99.7378...$ cm awrt 99.7 A1

(b) X represents number more than 100 cm. $X \sim B(12, 0.3)$ B1

 $P(X \le 2) = 0.2528$ awrt 0.253 MIAI

(c) Normal approximation $\mu = 400 \times 0.3 = 120$, $\sigma^2 = 84$ MI, A1

 $P(X > 127) \approx 1 - P(Z < \frac{127.5 - 120}{\sqrt{84}})$ ± 0.5 , standardise

 $\approx 1 - P(Z < 0.818)$
 $= 1 - 0.7939$
 $= 0.206$ or 0.207 A1 (6)

[NB] Part C is nowadays worth only 3 marks (since no need to standardise anymore)

1 mark for calculating mean = 120, and Var = 84

1 mark for using calculator/ stating we are looking for P (X > 127.5) (mark is for awarding continuity correction)

1 mark for getting awrt 0.206 or 0.207.
