

### Question 1:

A particle  $P$  of mass 3 kg moves from point  $A$  to point  $B$  up a line of greatest slope of a fixed rough plane. The plane is inclined at  $20^\circ$  to the horizontal. The coefficient of friction between  $P$  and the plane is 0.4.

$AB = 15$  m and the speed of  $P$  at  $A$  is  $20 \text{ ms}^{-1}$ .

(a) Find the work done against friction as  $P$  moves from  $A$  to  $B$ .

[3]

(b) Find the speed of  $P$  at  $B$ .

[4]

### Question 2:

A block of mass 10 kg is pulled along a straight horizontal road by a constant horizontal force of magnitude 70 N in the direction of the road. The block moves in a straight line passing through two points  $A$  and  $B$  on the road, where  $AB = 50$  m. The block is modelled as a particle and the road is modelled as a rough plane. The coefficient of friction between the block and the road is  $\frac{4}{7}$ .

(a) Calculate the work done against friction in moving the block from  $A$  to  $B$ .

[4]

The block passes through  $A$  with a speed of  $2 \text{ ms}^{-1}$ .

(b) Find the speed of the block at  $B$ .

[4]

### Question 3:

The points  $A$  and  $B$  are 10 m apart on a line of greatest slope of a fixed rough inclined plane, with  $A$  above  $B$ . The plane is inclined at  $25^\circ$  to the horizontal. A particle  $P$  of mass 5 kg is released from rest at  $A$  and slides down the slope. As  $P$  passes  $B$ , it is moving with speed  $7 \text{ ms}^{-1}$ .

(a) Find, using the work-energy principle, the work done against friction as  $P$  moves from  $A$  to  $B$ .

[4]

(b) Find the coefficient of friction between the particle and the plane.

[5]

### Question 4:

A particle  $P$  of mass  $0.5 \text{ kg}$  is projected from a point  $A$  up a line of greatest slope  $AB$  of a fixed plane. The plane is inclined at  $30^\circ$  to the horizontal and  $AB = 2 \text{ m}$  with  $B$  above  $A$ . The particle  $P$  passes through  $B$  with speed  $5 \text{ ms}^{-1}$ . The plane is smooth from  $A$  to  $B$ .

(a) Find the speed of projection.

[4]

The particle  $P$  comes to instantaneous rest at the point  $C$  on the plane, where  $C$  is above  $B$  and  $BC = 1.5 \text{ m}$ . From  $B$  to  $C$  the plane is rough and the coefficient of friction between  $P$  and the plane is  $\mu$ .

(b) By using the work-energy principle, find the value of  $\mu$ .

[6]

### Question 5:

A box of mass  $30 \text{ kg}$  is held at rest at point  $A$  on a rough inclined plane. The plane is inclined at  $20^\circ$  to the horizontal. Point  $B$  is  $50 \text{ m}$  from  $A$  up a line of greatest slope of the plane. The box is dragged from  $A$  to  $B$  by a force acting parallel to  $AB$  and then held at rest at  $B$ . The coefficient of friction between the box and the plane is  $\frac{1}{4}$ . Friction is the only non-gravitational resistive force acting on the box.

(a) Find the work done in dragging the box from  $A$  to  $B$ .

[6]

The box is released from rest at the point  $B$  and slides down the slope.

(b) Using the work-energy principle, or otherwise, find the speed of the box as it reaches  $A$ .

[5]

**Question 6:**

A ball is projected from a point  $A$  which is 8 m above horizontal ground. The ball is projected with speed  $u \text{ ms}^{-1}$  at an angle of  $\theta^\circ$  above the horizontal. The ball moves freely under gravity and hits the ground at the point  $B$ . The speed of the ball immediately before it hits the ground is  $2u \text{ ms}^{-1}$ .

(a) By considering energy, find the value of  $u$ .

[5]

The time taken for the ball to move from  $A$  to  $B$  is 2 seconds.

(b) Find the value of  $\theta$ .

[4]

(c) Find the minimum speed of the ball on its path from  $A$  to  $B$ .

[2]

## Numerical Answers:

- (1) (a) 166 J  
(b)  $13.7 \text{ ms}^{-1}$
- (2) (a) 2800 J  
(b)  $12 \text{ ms}^{-1}$
- (3) (a) 85 J  
(b) 0.19
- (4) (a)  $6.7 \text{ ms}^{-1}$   
(b) 0.40
- (5) (a) 8480 J  
(b)  $10.2 \text{ ms}^{-1}$
- (6) (a) 7.2  
(b)  $53.3^\circ$   
(c)  $4.3 \text{ ms}^{-1}$
