## Year 13 Mock Set\#02 Pure Paper 2

- Advised to print in "A3-booklets", this will allow all questions to be on the left hand side.
- You can also print in A4, double-sided, and two staples on the left
- If instead you print in 2-in-1 settings, first print the second page up to the last page, then print the cover page separately (to allow all questions on the left)

This exam paper has 12 questions, for a total of 100 marks.

## Andrew Chan

Last updated: 23rd February 2023
1.

Figure 1: https://www.desmos.com/calculator/2xsfs8acda

Figure 1 shows a sketch of the curve with equation

$$
y=\sqrt{x+2} \quad\{-2 \leq x \leq 6\}
$$

The finite region $R$, shown shaded in Figure 1, is bounded by the curve, the $x$-axis, and the line $x=6$.

The table below shows corresponding values of $x$ and $y$ for $y=\sqrt{x+2}$, rounded to 4 decimal places.

| $x$ | -2 | 0 | 2 | 4 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | 0 | 1.4142 | 2 | 2.4495 | 2.8284 |

(a) Use the trapezium rule, with all of the values of $y$ in the completed table, to find an approximate value of the area of $R$, giving your answer to 3 decimal places.

Use your answer to part (a) to find approximate values of
(b)
(i) $\int_{-2}^{6} \frac{\sqrt{x+2}}{2} d x$
(ii) $\int_{-2}^{6}(2+\sqrt{x+2}) \mathrm{d} x$

2. Given that

$$
2 \log _{4}(2 x+3)=1+\log _{4} x+\log _{4}(2 x-1) \quad\left\{x>\frac{1}{2}\right\}
$$

(a) Show that

$$
\begin{equation*}
4 x^{2}-16 x-9=0 \tag{5}
\end{equation*}
$$

(b) Hence solve the equation

$$
2 \log _{4}(2 x+3)=1+\log _{4} x+\log _{4}(2 x-1) \quad\left\{x>\frac{1}{2}\right\}
$$

5. In this question you must show all stages of your working. Solutions relying on calculator technology are not acceptable.

Figure 2: https://www.desmos.com/calculator/g0zwufzqir
Figure 2 shows a sketch the curve with equation

$$
y=2 \cos 3 x-3 x+4 \quad\{x>0\}
$$

where $x$ is measured in radians.
The curve crosses the $x$-axis at the point $P$, as shown in Figure 2.
Given that the $x$-coordinate of $P$ is $\alpha$,
(a) show that $\alpha$ lies between 0.8 and 0.9

The iteration formula

$$
x_{n+1}=\frac{1}{3} \arccos \left(1.5 x_{n}-2\right)
$$

can be used to find an approximate value for $\alpha$
(b) Using this iteration formula, with $x_{1}=0.8$, find, to 4 decimal places, the value of
(i) $x_{2}$
(ii) $x_{5}$

The point $Q$ and the point $R$ are local minimum points on the curve, as shown in Figure 2. Given that the $x$-coordinates of $Q$ and $R$ are $\beta$ and $\lambda$ respectively, and that they are the two smallest values of $x$ at which local minima occur,
(c) find, using calculus, the exact value of $\beta$ and the exact value of $\lambda$

6. A curve has equation $y=\mathrm{g}(x)$

Given that

- $\mathrm{g}(x)$ is a cubic expression in which the coefficient of $x^{3}$ is equal to the coefficient of $x$
- the curve with equation $y=\mathrm{g}(x)$ passes through the origin
- the curve with equation $y=\mathrm{g}(x)$ has a stationary point at $(2,9)$
(a) find $\mathrm{g}(x)$
(b) prove that the stationary point at $(2,9)$ is a maximum.

Figure 3

Figure 2 shows part of the curve equation $y=\mathrm{f}(x)$, where

$$
\mathrm{f}(x)=2|2 x-5|+3 \quad\{x \geq 0\}
$$

The vertex of the graph is at $P$ as shown.
(a) State the coordinates of $P$.
(b) Solve the equation $\mathrm{f}(x)=3 x-2$

Given that the equation

$$
\mathrm{f}(x)=k x+2
$$

where $k$ is a constant, has exactly two roots,

11. A circle $C$ has equation

$$
(x-k)^{2}+(y-2 k)^{2}=k+7
$$

where $k$ is a positive constant.
(a) Write down, in terms of $k$,
(i) the coordinates of the centre of $C$,
(ii) the radius of $C$.

Given that the point $P(2,3)$ lies on $C$,
(b) (i) show that $5 k^{2}-17 k+6=0$
(ii) hence find the possible values of $k$.

The tangent to the circle at $P$ intersects the $x$-axis at the point $T$
Given that $k<2$
